Executive Summary

Problem

Shopee Thailand experiences **20% Revenue Loss due to Cancellation**, with value excess **฿800 Million** in the past 3 years

Findings

Cancellation value is **not evenly distributed**—it is heavily concentrated among **high-volume transactions**, the **20–40 customer segment**, and core product categories like **Home and Electronics**.

Objective

Analyze Trends and patterns to find the **best method** to **decrease** loss due to cancellations to **10%** by **2028**

Recommendation

Suppressive : High-Density Sales **Interventions**
Preventive : **Deploy** Value-Based Retaining Triggers
Preservative : **Standardize** Cancellation Monitoring

Project Background

Contextualizing the Business challenge

Shopee Strive for Improvement - But do we?

The Head of Shopee Thailand has tasked the Data Team with delivering solutions to mitigate the persistent **high revenue loss driven by canceled orders over the past three years.**

The escalation reached a critical point in **December 2025**, when **losses spiked by 35%(285%) from previous year to ฿ 105 million.** Due to persistent upward trend over the years, the Head of Branch has prioritized the **immediate** deployment of solutions.

3 Years of Recurring Problem Without Resolution

Our Revenue also Increase – Surely it's not a big deal Right?

While our **revenue has increased** rapidly over the past three years, this growth **does not diminish the urgency of the issue**. In fact, our revenue loss tracks **almost identically** with our revenue growth trend. **December 2025** data highlights a critical leakage: **we forfeited 105 million Baht out of \$ 520 million in potential revenue**. This translates to a staggering **20% revenue loss** strictly driven by order cancellations. Which is past industry benchmark of **16%** ([Source](#))

Therefore the scope of analysis will heavily focus on **Loss due to Cancellation** and find the solution on how we can **effectively decrease** the value.

Loss Surpass Industry Benchmark , **Risky!**

**“How to decrease revenue loss
from order cancellation From 20%
to 10% by the end of 2028”**

“ To find the right method to decrease revenue
loss from order cancellation by 10% in 3 years”

Methodology

Project Workflow

Analysis Result

Discovering What Matters Most

Company Consistently Losing 1/5 Potential Revenue Each Quarter

3-year historical **cycle** shows we consistently **bleed 1/5 of our GMV**, a systemic leak that will naturally **multiply** into unsustainable losses as platform volume hits a **forecasted \$1.5 Billion**

Conclusion :

Consistently losing 1/5 of GMV suggests the current model is scaling **inefficiencies** rather than improving performance.

Customers Aged 20–40 Bears the Heaviest Financial Volume

As our **primary** economic driver, the **20 & 40** demographic generates a massive **\$3.1 Billion** in overall GMV, which directly translates into our **largest** absolute financial leak of over **\$619 Million**.

Conclusion :

“The 20–40 age segment acts as our **core** transaction driver, which correlates to them holding the largest share of loss”

Cancellation Value Concentrates in Bangkok Metropolitan Region

Bangkok stands out as our largest single leak at **฿310.6 Million**—nearly **double** any other province—driving the **Bangkok Metropolitan Region** collective loss past **฿620 Million**.

Conclusion :

“The capital region emerges as the primary **hotspot** for cancellation risk”

Home and Electronics Anchor 96% of Total Cancellation Value

Led by **Home at \$508.2 Million**, both the **Home and Electronics** categories **dictate** our financial leakage as their cancellation values scale symmetrically with their massive sales volumes.

Conclusion :

“Cancellations is highly centralized, with Home and Electronics alone capturing nearly the **entire** wasted Value

Cancellation Value Centers Symmetrically at \$200

Cancellation value closely tracks order **volume**, peaking at **\$170 M within the \$200 shipping fee tier** and remaining stable even above \$400, suggesting **limited** sensitivity to delivery costs."

Conclusion :

"Cancellation Value is baseline-driven, showing zero **friction** from delivery costs."

What the Data Reveals

Volume Driven

“Cancellations Value simply track our revenue. The more we sell in a specific segment, the more money we lose there”

20% Baseline

“The Cancellation Value is consistent at 20% across the board. It does not shift, no matter how we slice the data”

Recommendation

Systematic Approach to Solutions

Proposed Recommendation

Volume Driven

Focus Interventions Directly on High-Density Sales Segments

20% Baseline

Deploy Value-Based Retaining Triggers at Checkout

Standardize Cancellation Monitoring Across All Dashboards

Recommendation Workflow

Focus Interventions Directly on High-Density Sales Segments

Recommendation Workflow

Deploy Value-Based Retaining Triggers at Checkout

Recommendation Workflow

Standardize Cancellation Monitoring Across All Dashboards

Expected Result

Target Realization

- Achieving a 10% cancellation value ceiling by the end of 2028 through high-density interventions.
- Reduce cancellation losses through targeted recovery initiatives.

Operational Efficiency

- Zero wasted effort by shifting 100% of internal focus and server resources to secure high-density sales channels
- Eliminating isolated operational blind spots through targeted partner-courier and merchant guarantees in top-performing regions.

Platform Intelligence

- Transitioning to an active system that automatically deploys dynamic retention solutions before money leaves the platform.
- Establishing a single source dashboard across demographic and operational variable to prevent department from breaching 10% threshold.

"By shifting our focus from general operational fixes to value-driven, high-density interventions, we can structurally secure our GMV and support progress toward the 10% target"

10%

2028 Target Ceiling

Cutting overall cancellation value by 50% by 2028 through actionable and systematic workflow

Appendix

Additional Data

Data Quality Validation

Checking Missing and Duplicate Syntax

```
for name, df in df.items():
    print("DATASET: " + name)

    print("isShopee:")
    print(df.shopee)

    print("Following Values:")
    print(df.isnull().sum())

    print("Duplicates:")
    print(df.duplicated().sum())
```

Imputing Missing Value

Example :

```
dfs_original["shopee_order_items_thailand"]["product_campaign_id"].fillna(0, inplace=True)
```

Upload Dictionary Entity Column Syntax to fill null values with 0

Checking Data Type

Example :

```
dfs_original["shopee_order_items_thailand"].info()
```

Upload Dictionary Entity Show data type

Changing Data Type

```
dfs_original["shopee_shipments_thailand"]["order_item_id"].astype(str)
```

Upload Dictionary Entity Column Syntax to change data type (String)

Data is completely unique with 0% duplicate

Before

After

Entity	Completeness	Uniqueness	Consistency
Order items	470134	0	X
Orders	289653	0	X
Shipments	0	0	X
Customers	0	0	X
Sellers	0	0	X
Products	0	0	X

Entity	Completeness	Uniqueness	Consistency
Order items	0	0	O
Orders	0	0	O
Shipments	0	0	O
Customers	0	0	O
Sellers	0	0	O
Products	0	0	O

Correlation & Distribution Validation

Demographic Validation

Conclusion: Similar median across all demographic

Shipping Fee vs Loss corr

Pearson Scale
0,2980

Conclusion: Weak Positive association

Shipping Duration vs Loss corr

Pearson Scale
0,001305

Conclusion: Near Zero, Correlation
almost non existent

Concentration / Pareto Analysis

Product Category Concentration

Conclusion: Home and electronics contribute 96% of Loss due to Cancellation

Sellers Concentration

Conclusion: 48 out of 200 or roughly 24% sellers contribute 80% of total Loss due to Cancellation

Limitations & Future Work

Limitations

- Cancellation reason data was unavailable.
- Analysis focuses on historical patterns.
- Findings indicate association rather than causation.
- Seller operational metrics were not included.

Future Work

- Cancellation Reason Analysis
- Seller Performance Analysis
- Customer Behavior Analysis
- Predictive Cancellation Risk Modeling
